

With the March 5, 2008 memo to ACAs on the subject of verification of materials, is it permissible for my ACA to ask the EPA about inerts from the new list 4? If, from their point of view, these substances are okay, can my ACA authorize these inerts?

Your ACA may consult with the EPA regarding inerts on List 4. There is no "new List 4 Inerts," however, and your agent cannot just "view" materials as "okay" and authorize their use. Every material must be verified against the National List prior to use.
